

In response to Question #10:

Since the deployment of RI Bridges, 2 separate CCAP payrolls have been generated to pay the provider community. In Batch 1, a total of 725 providers were paid out of 760 providers who were expecting payment. During the second batch run, a total of 737 providers were paid. No providers were missed in the second batch generation.

Note: There is not a static number of providers who receive payment bi-weekly. Provider payments are dependent upon enrollment and attendance data being received prior to the batch execution. In the legacy system from Feb. 15th through September 7th, an average of 716 providers were paid in each batch.
